

# What is the construction?

The Los Olivos Community Services District (LOCSD) has been directed by the Central Coast Regional Water Quality Control Board to install three groundwater monitoring wells. You can see more details on the LOCSD website at:

<https://www.losolivoscsl.com/technical-studies-and-reports>

The wells will be at ground level and, once completed, can be parked on, driven over, and so on. The wells will be drilled between 50 to 100 feet deep. This depth is often referred to as the shallow groundwater table. We are drilling into the shallow groundwater table to determine how much impact our septic tanks are having on this water table. As you may know, the Los Olivos area is designated as a Special Problems Area due to high nitrate levels. We drilled two wells in November 2022, which confirmed that portions of Los Olivos are at or above acceptable levels. Details of samples taken can be found on our website, on the page noted above. New samples will be taken two to four times a year.

If you have questions, please contact our General Manager, Guy Savage, at: [gm.locsd@gmail.com](mailto:gm.locsd@gmail.com) or (805) 500-4098
